Fooden, Jack

1971. Report on Primates Collected in Western Thailand.

Fieldiana (Zoology) **59** : 1-62, 6 plts.

A total number of 152 specimens of nine species of primates were collected and thorough studied. The author has the opinion that *Macaca fascicularis* and *M. mulatta* should be regarded as species instead of subspecies as previously indicated.

Hill, J.E. and Kitti Thonglongya

1972. Bats from Thailand and Cambodia.

Bull. Brit. Mus. (Nat. Hist.) Zool. **22** : 173-196.

An enumeration of 27 species belonging to 17 genera is given. *Myotis ecaudatus*, *Chironax melanocephalus*, *Myotis annectans*, *Pipistrellus cadornae* and *Hesperoptenus tickelli* are reported for the first time from Thailand, together with *Pteropus hypomelanus* from the islet of Koh Som in the South China Sea.

Muul, Illar and Kitti Thonglongya

1971. Taxonomic Status of *Petinomys morrisi* (Carter) and its relationship to *Petinomys setosus* (Temminck and Schlegel).

J. Mammal. **52** : 362-369.

Specimens of a small flying squirrel, *Petinomis*, recently collected from northern Thailand and West Malaysia show great similarity and appear to belong to a single species. Specimens from Thailand are considered to represent a slightly larger subspecies of *Petinomys setosus*, thus becoming *P.s. morrisi* (Carter, 1942).

Schlitter, Duane A. and Kitti Thonglongya

1971. *Rattus turkestanicus* (Satunin, 1903), The Valid Name for *Rattus rattoides* Hodgson, 1845 (Mammalia : Rodentia).

Proc. Biol. Soc. Wash. **84** : 171-174.

The name *Mus rattoides* Hodgson (1845) is preoccupied by and consequently a homonym of *Mus rattoides* Pictet & Pictet (1844).
